PROJECTS DEVELOPED

- **Smart Irrigation System**

  Objectives of the project involve the study of:

  - Level of awareness amongst the farmers about the easily available and seamless Information Technology applications in Agriculture to overcome few or all the challenges faced by them during farming.
  - To develop Smart Irrigation System which will irrigate the plants depending on the soil moisture and install the same in the farms to avoid over irrigation to the plants.
  - To get up-to-date information about the irrigation on mobile phones in terms of SMS.
  - To check the availability of water in the water reservoir, if any in the farms and notify the farmers, if the reservoir is empty through SMS.

- **Web Crime Mining Using Event Ontology**

  Scope:

  - To analyze web information from the perspective of events
  - To construct event ontology which extracts the attributes and relations in web pages and then reconstruct the scenario for crime mining
  - To implement a prototype system for text classification and also for finding the accuracy of test data set based on training data set
  - To validate event ontology-based web crime mining using classification techniques such as Support Vector Machine (SVM) and Naïve's Byes
  - To compare the results of both the classification techniques

  Objective:

  The objective of this project is to design and implement an event ontology based cyber crime mining procedure that concerns web texts prehandling, feature extraction, feature reconstruction and crime mining.

  Responsibility:

  - Analysis of the system.
  - Design and implementation.
  - Testing.

  Tool Used: Java

- **Finite Element Analysis of DICOM Image**

  Scope:

  - Vertebral column is the vital part of human body as whole posture of body depends on it. Common diseases related to Vertebral column are Spinal fracture, vertebral wedge fracture, cervical pain, Lower Back pain etc.
  - General remedies for this are X-Rays, CT scan, Ultra Sound, and Endoscopy etc.
  - The drawback of current techniques is lack of clear visualization. Current methods does not highlight on dimensional features for the implementation process.

  Objective: The objective of this project is to

  - Retrieve the encrypted information of DICOM Image,
  - Generating Image from Image data by decryption process,

- Creating animation from n number of images,
- Boundary detection of Lumber Spine etc.

Responsibility:

- Analysis of the system.
- Design and implementation.
- Testing.

Tool Used: Java, Web Ontology Language (OWL)

❖ **Prescription Software**

Scope:

- This project will maintain the information about all symptoms of patients, information of drugs and medicine, patient information etc. Doctor enters the symptoms and disease name perfectly; the software would check for drugs or combinational drugs and display lists of suggestive drugs. Doctor can select from the list or can also prescribes a new one. The dosage would also be suggested. If finished, prescription would be printed and information would be stored for that patient.

Responsibility:

- Analysis of the existing system
- Coding, report and testing module
- Presenting system to the company

Tool Used: VB, MS-Access
